**Watch for the Tell Tail Signs of Aging**

Just like with people, age can creep up slowly on your dog, and you might not realize your furry friend is starting to display some age-related changes. If you've noticed any of these signs, it might be time to change your dog's food or talk to your vet.

<b>T</b>	<b>A</b>	<b>I</b>	<b>L</b>	<b>S</b>
<b>THINKING</b>	<b>ACTIVITY</b>	<b>INTERACTIONS</b>	<b>LOSS OF CONTROL</b>	<b>SLEEP-WAKE CYCLE</b>
Your pet is now confused by ordinary things, like how to find their food!	Naps have become more appealing than playing or exploring.	Your pet doesn't socialize with you as much as before.	Your pet is well-trained, but has started having accidents.	Sleeping patterns have changed, with more awake time during the night.

**Pet's Gene Activity Changes at 7 Years Old**

Each column in these maps represents a different pet, and each row represents a specific gene to give us a full picture of how their cells change over time.

Cat

Dog
