# Congratulations

Fahs Construction Group and Rittenburg Construction  
For winning the ACI GOLD award for Excellence in Masonry Design Installation

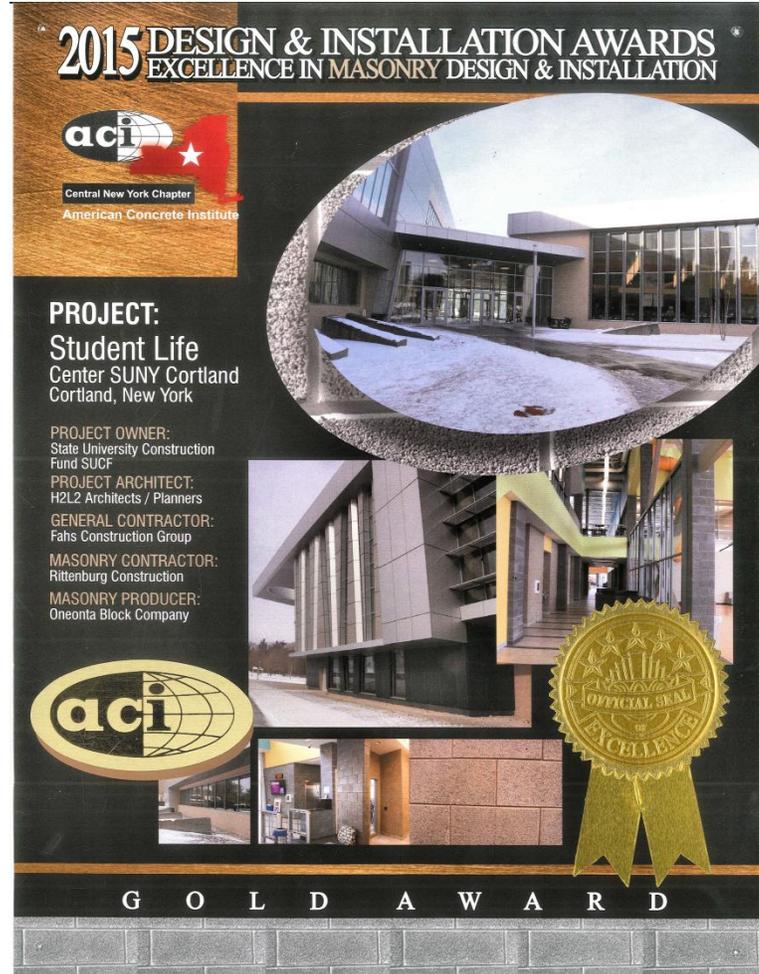

American Concrete Institute®  
*Advancing concrete knowledge*

The State University of New York (SUNY) Cortland Student Life Center is a 148,000 sf recreation center completed in June, 2015. The 43 million dollar building creates a hub of physical and social recreation, as well as dining, on campus.

There were over 20,000 Ground face block (produced by Westbrook Concrete Block, Co.) and 80,000 lightweight concrete block incorporated into the project.

The facility is designed to reduce energy consumption through roof-top solar panels, a green roof, oversized fans, and more, and is pending LEED Gold certification

Architect Robert Heins gave the presentation at the awards ceremony. He was one of 3 judges and has worked all over the world including Dubai, Stockholm, Puerto Rico, California and New York.

Mr. Heins loved the project and was impressed by the design, light and mix of materials and durability. He really highlighted the quality of the ground face, stating that they were the best he had ever seen, and that the installation was first quality.

Since its opening, the University has seen a 100% increase in daily participation in open recreation, a 30% increase in mind/body programming and a 200% increase in group exercise programming. It is impressive what a well designed & built facility can have on overall quality of life.

*Great job!*
